★★★★☆ 3 weeks ago

I've encountered numerous issues in this course due to the use of more advanced software versions than those demonstrated in the videos. These discrepancies lead to trivial flaws that waste time and distract from the primary learning goals. Overall, the course content is good, but the reliance on templates results in repetitive code and actions. The user forum has been a helpful resource, as fellow learners often provide assistance and solutions to problems. However, I have not received any direct support from the instructor. Instead, responses typically redirect me to other links, requiring further research to find solutions on my own.

Excellent Content it would be great if you create a video of changes needs to be done to convert 5.0 to 6.0 or 8.0

I just think there's some things here and there that needs more explanation of why and how those things work. But all in all excellent course! Thank you!

Awesome, the course had helped me to understand the basic of ASP.NET Core MVC. I highly recommend this course to any aspiring ASP.NET Core Developer. Identity and Azure configuration is most important section for me. Although if possible need to explain how internally Authentication and Authorization internally handled by ASP.NET Core which will give more clarity.

it's and good experience for me to clear my all concepts like - how to use role identity in built asp.net as well as view component concepts.

most of concept usable to my real time project.

Thanks.

Very lack of explanation, many things are done but not told why. Some things I can research on my own to understand, but there are things I still don't understand till now

It was generally a really solid course. Instructor was always trying to answer my questions as soon as possible.

There were quite a few errors along the way, so I had to do a lot of debugging, but it was a part of my lesson aswell I guess.

Ik vindt het woord gebruik wat omslachtig, dingen kunnen korter, meer "to the point" en geef eens wat voorbeelden van waar je over spreekt. Als je het hebt over simpele en "andere" services. Dan zegt me dit niks, en ja ik snap dat je dit in de cursus wilt uitleggen, maar omdat er nog niets is om die informatie aan op te hangen zeg je eigenlijk niets. Als je wat oppervlakkige voorbeelden geeft zoals: een simpele service update je inlog status elke 2 minute gecontroleerd
